DEVIN WORKSHOPS · 01

Getting started with Devin

Connect a repo, set up your environment, and ship your first pull request.

Devin

AGENDA

What we'll do in 45 minutes

1. **Connect your Git provider** and choose repos
2. **Set up the environment** so every session starts ready
3. **Start your first session** with a well-scoped task
4. **Review the pull request** and merge it

STEP 1

Connect your Git provider

In Settings, connect GitHub, GitLab, Bitbucket or Azure DevOps, then pick the repositories Devin is allowed to work in.

Start with one repo you know well. You'll be able to judge Devin's work faster.

STEP 2

Set up the environment

Install

The commands to install dependencies and tools.

Run

How to start the app locally.

Test

Lint, type checks and the test suite.

Save

Devin saves the setup so new sessions start ready to work.

STEP 3

Start your first session

TOO VAGUE

```
Improve the share dialog
```

READY TO RUN

```
In acme/web, add a "Copy link"
button to the share dialog.
Use the existing <Button>.
Add a unit test.
Open a PR when tests pass.
```

STEP 4

Review the pull request

- ✓ Read the diff like a teammate’s PR
- ✓ Leave comments on the PR; Devin pushes follow-up commits
- ✓ Let CI run; Devin fixes failing checks
- ✓ Merge when you’re happy

YOUR TURN

Ship your first PR with Devin today.
